POLASONIC AUTOFOCUS 5000 BLACK

SX-70 non foldable Polaroid camera was created in 1978. The camera has 1 plastic lens with fixed aperture (103mm, f14.6) shutter speed 1-1/150 sec. You can choose either the automatic or manual distance adjustment (0.9m-inf) this Polaroid camera features autofocus functionality which measures the distance through ultrasound to set the right focus for sharp and clear pictures. It has an exposure compensation dial around the electric eye. Camera uses SX-70 integral film types from Polaroid or PX-70 colour shade and PX-100 silver shade films.
